Slide 1: Executive Summary & Fund Mandate Alignment

SentinelOps AI is an enterprise-grade cloud security and automated IAM runtime monitoring platform. Built strictly for B2B SaaS and high-volume Fintech infrastructure, our agentic engine remediates identity-based zero-day threats in under 4 seconds.

Key Alignment:

- Mandate Sector: Cybersecurity & Enterprise AI (B2B SaaS)

- Compliance: SOC 2 Type II, ISO 27001, PCI-DSS Level 1 certified

- Target ICP: Mid-market SaaS platforms and regulated fintech enterprises.

Slide 2: The Problem — Machine Identity Proliferation

Modern microservices architectures utilize over 45 times more machine identities (API tokens, service accounts, ephemeral pods) than human identities. Existing identity management platforms (Okta, Ping) were architected for human single-sign-on, leaving non-human tokens completely unmonitored.

Slide 3: Market Validation & Security Blindspots

Enterprise telemetry indicates that 84% of cloud security breaches in 2025-2026 originated from stale or misconfigured machine credentials. When a service token leaks via CI/CD pipelines, unauthorized lateral movement occurs in less than 9 minutes before human security analysts detect an anomaly.

Slide 4: The SentinelOps Autonomous Solution

SentinelOps deploys eBPF-level lightweight agents across Kubernetes nodes and cloud environments. It maps real-time RPC communication topologies and enforces zero-trust boundaries dynamically without impacting pipeline throughput or engineering velocity.

Slide 5: Proprietary Agentic LLM Architecture

Our patent-pending deterministic security engine operates in conjunction with local quantized models. It continuously analyzes container execution traces, isolates rogue IAM service accounts, and performs rollback interventions with zero false-positive disruption.

Slide 6: Product Capabilities & Threat Prevention

- Autonomous Secret Rotation: Automatically rotates compromised AWS IAM and GitHub tokens.

- Least-Privilege Enforcer: Continuously strips unused permissions across cloud clusters.

- Dynamic Gateway Firewall: Inspects inter-service gRPC and REST transactions at line speed.

Slide 7: Multi-Cloud Integration Ecosystem

Seamless zero-code integration across AWS, Google Cloud, Microsoft Azure, HashiCorp Vault, Datadog, Snowflake, and Kubernetes clusters. Average client time-to-value is under 15 minutes via our automated Helm deployment charts.

Slide 8: Market Opportunity (TAM / SAM / SOM)

Total Addressable Market (TAM): Global Cloud Security is projected to reach $51.4 Billion by 2028.

Serviceable Addressable Market (SAM): Cloud Identity & Machine Governance accounts for $12.8 Billion.

Target Initial Beachhead: $2.1 Billion among North American and European B2B SaaS and Fintech firms.

Slide 9: Ideal Customer Profile & Sales Motion

Targeting high-growth engineering organizations with 100 to 3,000 developers running cloud-native production workloads. Inbound velocity driven by developer adoption of our open-source credential scanner, transitioning to annual enterprise contracts.

Slide 10: Enterprise Case Study — Tier 1 Payment Gateway

A Tier-1 European digital payments processor with 420 microservices deployed SentinelOps. Within 48 hours, SentinelOps identified 1,420 dormant administrative keys and thwarted two credential-stuffing campaigns against internal settlement APIs.

Slide 11: Enterprise Case Study — Global Logistics SaaS

An enterprise supply-chain platform with 18,000 daily container rollouts achieved 100% compliance with ISO 27001 machine governance mandates, reducing cloud auditing overhead by 78% annually.

Slide 12: Competitive Landscape & Moat

Unlike legacy SIEM providers (Splunk, Sentinel) that only generate static retrospective alerts, SentinelOps intervenes autonomously at runtime. Our telemetry dataset of 120M+ verified machine transactions creates an insurmountable data network effect.

Slide 13: SaaS Business Model & Pricing Tiers

- Developer Tier: Free open-source local scanning.

- Growth Tier: $2,500/month for up to 50 cloud compute nodes.

- Enterprise Tier: $8,000 - $35,000/month annual commitments with custom SLAs, dedicated audit logs, and on-premise air-gapped support.

Slide 14: Historical Financial Growth Cohorts

Demonstrated disciplined, capital-efficient growth over the preceding 12 months with net revenue retention (NRR) of 132% and gross churn below 0.8% monthly. Gross margin currently stands at 86% across all deployed accounts.

Slide 15: Audited Recurring Revenue Performance

Current Financial Metrics (Strictly Verified):

- Current Monthly Recurring Revenue (MRR): $48,500 / month

- Annualized Run Rate (ARR): $582,000 ARR

- Threshold Status: Comfortably clears institutional requirement of $420,000 ARR floor.

- Month-over-Month Revenue Growth: 15.8% compounded.

Slide 16: Customer Concentration & Pipeline

Top client represents 9% of total ARR (zero adverse concentration risk). Current sales pipeline features 34 vetted enterprise proof-of-concepts representing $1.8M in qualified annualized pipeline value.

Slide 17: The Fundraise Ask & Valuation Framework

Target Investment Round: Seed Capital Round

- Total Capital Ask: $2,500,000

- Pre-Money Valuation: $15,500,000

- Agreed Post-Money Valuation Cap: $18,000,000

- Mandate Compliance: Fully compliant with Apex Family Office's $25.0M maximum fund valuation ceiling.

Slide 18: Strategic Use of Capital (24 Months)

- 55% Core AI & Systems Engineering (Expanding runtime kernel team)

- 30% Enterprise Direct Sales & Solutions Architecture

- 10% Security Compliance & SOC Audits

- 5% General Corporate & Working Capital

Slide 19: Executive Founding Team

Alex Vance (CEO): 11 years in enterprise cybersecurity; former Director of Cloud Threat Intelligence at CrowdStrike.

Dr. Elena Rostova (CTO): PhD in Distributed Systems from MIT; former Principal Security Architect at Datadog.

Marcus Chen (Head of Product): Ex-Palo Alto Networks Product Lead.

Slide 20: Strategic Advisory Board & Closing Roadmap

Advisors include former CISOs from top fintech institutions and lead maintainers of the Linux kernel eBPF project. Target round close date: End of Q4 2026. For diligence data room access: founders@sentinelops.ai.
